Smart Soil Detection & Crop Recommendation Report

Generated on: 02 Sep 2026, 22:00

Soil Type (Image, reference only)

Loamy — 99.8% confidence (CNN (PyTorch Deep Learning))

Shown for reference only — not used in crop or fertilizer decisions below.

Soil Parameters

pH	Nitrogen (N)	Phosphorus (P)	Potassium (K)
6.5	65	48	45

Weather Conditions

Temperature (°C)	Humidity (%)	Rainfall (mm)
26.5	72	110

Soil Health Score

100 / 100 — Excellent

pH	N	P	K
25/25	25/25	25/25	25/25

Recommended Crops

#	Crop	Confidence
1	Jute	45%
2	Papaya	17%
3	Maize	16.5%

Fertilizer Advice

N-P-K (Balanced): Maintenance dose (balanced NPK, e.g. 19-19-19) — All major nutrients are within the ideal band.

Soil Improvement Advice

• Soil nutrient status is healthy — maintain with regular organic matter addition and crop rotation.
• Practice crop rotation and cover cropping to sustain long-term soil structure and microbial health.

Risk Alerts

No significant risks detected for the given conditions.

This report is generated by an automated decision-support system based on the soil and weather values provided. Image-based soil classification is shown for reference only and is not used for crop or fertilizer decisions. Please consult a local agronomist before making major input investment decisions.
