Smart Soil Detection & Crop Recommendation Report

Generated on: 02 Sep 2026, 12:40

Soil Parameters

pH	Nitrogen (N)	Phosphorus (P)	Potassium (K)
6.3	35	45	42

Weather Conditions

Temperature (°C)	Humidity (%)	Rainfall (mm)
27.7	75	15.2

Soil Health Score

92 / 100 — Excellent

pH	N	P	K
25/25	17.5/25	25/25	25/25

Recommended Crops

#	Crop	Confidence
1	Muskmelon	36.5%
2	Mungbean	26%
3	Papaya	17.5%

Fertilizer Advice

Nitrogen (Low): Urea (46-0-0) — N=35.0 is below the ideal band (50-100).

Soil Improvement Advice

• Add well-decomposed compost or farmyard manure (FYM) to boost nitrogen naturally.
• Practice crop rotation and cover cropping to sustain long-term soil structure and microbial health.

Risk Alerts

[!] Low rainfall — irrigation is required to maintain adequate soil moisture.

This report is generated by an automated decision-support system based on the soil and weather values provided. Image-based soil classification is shown for reference only and is not used for crop or fertilizer decisions. Please consult a local agronomist before making major input investment decisions.
